A Note About Class Numbers

Please note course numbers (example: BBS 601) are not the same as class numbers (example: 1257). **Class numbers are unique identifiers that change every semester.** The class number is included with the course information, except for research or tracking courses (where there are multiple faculty sections). You will need to use the Class Numbers Lists or look up the class number in the online system to register for any Research or Tracking Course.

ASSISTANCE

Before contacting GSBS administration, please review the information on the [GSBS Registration page](#). Everything you need to register, including what you should register for, can be found on this page.

Assistance with Administrative Questions

Basic Biomedical Sciences Students contact Tricia.Doane@umassmed.edu

Biophysical, Chemical, and Computational Biology Students contact James.Munro@umassmed.edu

Clinical and Translational Sciences Students contact Kate.Lapane@umassmed.edu

MD/PhD Students contact Merin.MacDonald@umassmed.edu

Assistance with Electives

If you have questions regarding your program requirements or the selection of elective courses, you should review the [available online information](#); or meet with your [Graduate Program Director](#) or Thesis Advisor for clarification.

CREDIT HOUR DEFINITIONS AND AUDIT PROCESS

Updated 10/1/2020

UMass Chan Medical School, which consists of its T.H. Chan School of Medicine, Tan Chingfen Graduate School of Nursing and Morningside Graduate School of Biomedical Sciences, fulfills the following Federal definition of a credit hour:

“Except as provided in 34 CFR 668.8(k) and (1), a credit hour is an amount of work represented in intended learning outcomes and verified by evidence of student achievement that is an institutionally established equivalency that reasonably approximates not less than –

1. One hour of classroom or direct faculty instruction and a minimum of two hours of out-of-class student work each week for approximately 15 weeks for one semester or trimester hour of credit, or 10-12 weeks for one quarter hours of credit, or the equivalent amount of work over a different amount of time; or
2. At least an equivalent amount of work as required in paragraph (1) of this definition for other academic activities as established by the institution, including laboratory work, internships, practica, studio work, and other academic work leading to the award of credit hours.”

Morningside Graduate School of Biomedical Sciences Course Credit Hour Assignments and Assessments

All new courses, their associated syllabi, methods of student evaluation and credit hours must be reviewed by the Morningside Graduate School of Biomedical Sciences Assembly Curriculum Committee. Once approved by this Committee, the course is presented for approval to the Morningside Graduate School of Biomedical Sciences Assembly, a body of representative faculty, students and administrators selected by each Program of Study and appointed by the Morningside Graduate School of Biomedical Sciences Dean. An approved course returns to the Morningside Graduate School of Biomedical Sciences Assembly for review only when the content, evaluation methodology or credit hours are significantly altered or when student evaluations of the course demand the attention of the Morningside Graduate School of Biomedical Sciences Dean, Morningside Graduate School of Biomedical Sciences Assembly and/or the faculty.

Faculty and Student Notifications:

The credit hour assignments will be available on public websites where they can be accessed by individuals or offices with UMass Chan credentials for inclusion in appropriate materials. It will also be presented at relevant curriculum committee meetings to ensure faculty awareness.

The credit hour assignments are posted on the Morningside Graduate School of Biomedical Sciences internet site at:

1. <https://www.umassmed.edu/gsbs/academic-student-affairs/academic-milestones/courses/all-courses/>
2. <https://www.umassmed.edu/gsbs/academics/courses/>

Examples of credit assignments:

- BBS719 – Cellular Biochemistry: This course meets during the spring semester for three hours of contact time each week (90 minutes/day, two days/week). A minimum of six hours preparation time is expected each week. This course is assigned three credits.
- BBS782 – Bases of Brain Disease: This course meets during the spring semester for two hours of contact time each week (120 minutes/day, one day/week). A minimum of four hours preparation time is expected each week. This course is assigned two credits.

- CTS603B – Statistical Methods for Survival and Longitudinal Analysis: This course meets during the spring semester for 4.5 hours of contact time each week (90 minutes/day, three days/week). A minimum of eight hours preparation time is expected each week. This course is assigned four credits.

COURSES FOR REGISTRATION

Basic Biomedical Sciences and Biophysical, Chemical, and Computational Biology Courses

BBS 602 - Preparation for Qualifying Exam | Class #: 3490

This course will help prospective scientists in the biological and medical sciences communicate their work effectively, in writing, graphics and oral presentations. The course teaches how to prepare and write a grant proposal, how to present orally to scientific peers, and how to give and receive scientific feedback. Students will write, peer edit and present an early draft of a potential qualifying proposal to help them prepare for their QE, and they will learn the basics of writing and submitting an F proposal.

Associated Programs/Pathways: Basic & Biomedical Sciences; Biophysical, Chemical, and Computational Biology;

Prerequisites: None

Fulfills an elective requirement: No

Credits: 2

Grading Type: Pass/Marginal Pass/Fail

Assessment Modalities: Lecture/Discussion, Participation, Presentations, Proposals, Written Assignments, Peer feedback

BBS 614 - Scientific Inquiry in Biomedical Research | Class #: 2373

This problem-based course provides learning opportunities through exploration of multidisciplinary areas of contemporary biomedical research, and creates a forum for practice in the skills required for research.

Associated Programs/Pathways: Basic & Biomedical Sciences

Prerequisites: Matriculation in the PhD Program

Fulfills an elective requirement: No

Credits: 3

Grading Type: Pass/Marginal Pass/Fail

Assessment Modalities: Lecture/Discussion, Participation, Presentations, Problem Sets, Proposals, Written Assignments

BBS 620A - How Biophysical, Chemical, and Computational Strategies Impact Biological Research – Part A | Class #: 2662

This is an inter-disciplinary course focused on the use of quantitative, physical techniques in biological problem solving. Students will become familiar with contemporary methodologies and their applications in different biological and disease contexts. Topic areas will include structural biology and molecular biophysics, optical microscopy, bioinformatics and computational biology, chemical biology, and biomedical imaging. Students will gain exposure to a variety of different biological fields through the lens of cutting-edge quantitative tools and techniques. The course is required for all first-year students in the Biophysics, Chemistry, and Computational Biology (BCCB) Pathway.

Associated Programs/Pathways: Biophysical, Chemical, and Computational Biology

BBS 707 - Experiential PhD: Professional Development for Internship | Class #: 2430

In this professional development course, students will explore how relevant practical experiences enhance classroom learning and research, and how scholarly work enhances their practical training. This course will provide Morningside Graduate School of Biomedical Sciences students opportunities to connect theory and practice through experiential learning in a professional work environment. Students will examine, articulate, and defend their professional values and use concurrent reflection exercises to create “maps” and action steps to reach multiple long-term professional goals. We will focus on the value of continuous learning through reflective practice, mentorship, professional organizations and conferences, and leadership opportunities in the field. During this course, students will develop their professional identity and commit to lifelong learning. Students are required to take this course before going out on internship and must receive additional permissions from their advisors and TRAC approval for internship placement. This process ensures that the chosen internships align with the student's academic and career goals and confirms that they are prepared for the experience.

Associated Programs/Pathways: All PhD programs and pathways

Prerequisites: Approval of TRAC

Fulfills an elective requirement: No

Credits: 1

Grading Type: Pass/Marginal Pass/Fail

Assessment Modalities: Lecture/Discussion, Participation, Presentations, Written Assignments

BBS 708 - Biomedical Internship Placement | Class #: 2460

BBS 708 – Biomedical Internship Placement is a doctoral-level, variable credit-bearing course that allows Biomedical PhD students at the Graduate School of Biomedical Science at UMass Chan Medical School to gain hands-on experience in diverse professional settings while maintaining active enrollment at the university. Designed as a companion to BBS 707: Professional Development for Internship, this course supports career exploration and skill development in an academic and non-academic, translational, or interdisciplinary environments such as biotech firms, pharmaceutical companies, clinical research organizations, government agencies, or scientific policy and communication roles.

Students remain formally registered at the University throughout the internship term, preserving access to University services, advising, and health benefits. The course ensures that doctoral training is integrated with experiential learning, providing a structured mechanism for applying research, analytical, and communication skills to real-world challenges.

Each internship is supported by a faculty mentor, the GSBS Office of Career and Professional Development, and the host organization to ensure alignment with career goals and professional standards. Students will complete a set of required academic deliverables that facilitate reflection, integration of learning, and assessment of skill development.

Associated Programs/Pathways: All PhD Programs and Pathways

Prerequisites: Completion or concurrent enrollment in BBS 707: Professional Development for Internship; approval from research advisor and Internship Coordinator

Fulfills an elective requirement: No

Credits: Variable

Grading Type: Pass/Marginal Pass/Fail

Assessment Modalities: Internship Learning Agreement (pre-approved by host, mentor, and university); Midterm check-in and reflective journal entries; Final report and professional presentation or portfolio; Host supervisor performance evaluation; Participation in university-led post-internship debrief

Course Leadership

Course Director: Tison-Thomas, Lisa | Lisa.Tison-Thomas@umassmed.edu

Additional notes: Typically run for 6 weeks or more with permission.

BBS 714 - RNA Biology II | Class #: 2663

The course will cover diverse topics in RNA biology using primary literature as source material. Each three-hour class will comprise a student-led presentation of background material followed by a group discussion of two research papers that all students will have read in detail beforehand. Students will learn about both historical advances and cutting-edge topics in RNA biology while building critical reading, communication, and presentation skills.

Learning Objectives: Students will learn about both historical advances and cutting-edge topics in RNA biology while building critical reading, communication, and presentation skills. By the end of this course, students will:

Acquire a fundamental understanding of nucleic acids biochemistry, molecular and cellular biology, and the history of the field

Develop critical research literature reading skills:

- Identify the key question(s) addressed in a study
- Understand the experimental techniques used and their limitations
- Identify the conceptual limitations of a study
- Propose alternative approaches
- Develop critical thinking and effective communication (presentation and discussion) skills:
- Identify important problems in the fields of RNA biology and therapeutics
- Clearly formulate ideas
- Actively participate in discussions by providing thoughtful questions and addressing constructive criticisms from others
- Understand different viewpoints and how to respectfully question/critique them

Assessment will be based on engagement with course material, participation in class, student presentations and quizzes. This course does not require prerequisite courses and is not a prerequisite to other courses.

Associated Programs/Pathways: RNA Therapeutics and Biology; Biochemistry and Molecular Biotechnology

Prerequisites: None, but completion of RNA Biology I is preferred

Fulfills an elective requirement: Yes

Credits: 3

Grading Type: Letter

Assessment Modalities: 1 exam at the end of bootcamp; weighted at 10%, Lecture/Discussion, Participation, Presentations, Problem Sets

BBS 748 - Introduction to Cellular Metabolism and Disease | Class #: 2390

This course will expose students to a variety of topics related to cellular metabolism. The course will cover material ranging from foundational principles to current leading-edge research. The principles and mechanisms regulating metabolism will be explored from multiple perspectives, including biochemistry, biophysics, genetics, molecular biology and cell biology.

Associated Programs/Pathways: Postbaccalaureate Research Education Program; Interdisciplinary; Translational Science

BBS 789 - Neuroimmune Interactions in Health and Disease | Class #: 3492

Neuroimmunology, though rooted in classical ideas linking mind and body, from Hippocrates' humoral theory to Hans Selye's discovery of the hypothalamic–pituitary–adrenal (HPA) axis, has undergone a profound transformation. New anatomical structures and signaling pathways have revealed a dynamic communication between the nervous and immune systems. Meanwhile, neurological and neurodegenerative disorders such as Alzheimer's disease, Multiple Sclerosis, and Amyotrophic Lateral Sclerosis are rising in prevalence and remain poorly understood and difficult to treat. In parallel, the spread of brain-impacting infections highlights the need to unravel neuroimmune mechanisms. This course integrates classical and emerging concepts in neuroimmunology through lectures, interactive discussions, seminar presentations, and research proposal development. Structurally, it has three main activity blocks as described below:

Block 1: Seminar presentation and discussion. Learning activities: presentations, class discussion, analysis of published research. Students will select a paper from a curated list provided by the course coordinator and present it in a seminar format. Each presentation should clearly address the background, experimental approach and key results, conclusions, and overall significance of the study. Presentations should be concise, lasting 20-25 minutes, and will be followed by 5-10 minutes of discussion. The topics are: novel brain lymphatic structures, neuroimmunology at the brain borders, cerebrospinal fluid dynamics and immune regulation, microglia and neuroinflammation, astrocytes and neuroinflammation, immunology of neuroinfection, neuroimmune interactions shaping behavior, the gut–brain axis.

By the end of Block 1, students will gain a solid understanding of fundamental and emerging concepts in neuroimmune interactions, including brain lymphatics, border immunity, glial biology, cerebrospinal fluid dynamics, and the gut–brain axis. They will also develop skills in critically evaluating scientific literature, interpreting experimental data, and applying these concepts to generate hypotheses and strengthen their own research.

Block 2: Research Proposal Development and Presentation. As a capstone activity, students will develop and present an original research proposal based as a follow up study from the paper analyzed in Block 1. Through hands-on grant writing, they will identify knowledge gaps, formulate testable hypotheses, define specific aims, and design feasible experimental approaches, developing essential skills for independent research and scientific proposal writing.

Block 3: Grant Review and Scoring. Students will participate in a mock NIH-style study section, critically evaluating and scoring their peers' research proposals. Working in reviewer panels, they will prepare structured critiques based on NIH review criteria, including Significance, Innovation, Approach, and Overall Impact, while gaining practical experience with the scientific peer-review process.

BBS 800 - Biomedical Sciences Tutorial | Class #: TBD

This highly flexible tutorial is designed to provide students with an in-depth exploration of a specified topic of interest while benefiting from structured feedback and mentorship. The mentor must provide a syllabus to the Associate Dean of Academic Affairs that includes the essential elements of graduate course syllabi prior to the student enrolling in the tutorial.

Associated Programs/Pathways: All PhD Programs and Pathways

Prerequisites: None

Fulfills an elective requirement: No

Credits: Variable

Grading Type: Pass/Marginal Pass/Fail

Additional notes: Individual courses will be created as requested each semester and will have a suffix of -1, -2, -3, etc. with each suffix being associated with individual faculty members.

BBS 814 - Neurobiology Seminar | Class #: 2352

Participants in this course will attend the Department of Neurobiology Seminar Series. Attendance at > 60% of seminars in a semester is needed for a passing grade. Program in Neuroscience students are required to take 2 semesters of BBS 814.

Associated Programs/Pathways: Neuroscience

Prerequisites: None

Fulfills an elective requirement: No

Credits: 1

Grading Type: Pass/Marginal Pass/Fail

Assessment Modalities: Students are expected to attend at least 60% of seminars in a semester.

BBS 821 - Molecular and Cellular Immunology | Class #: 1369

Some of the most active areas of current immunology are investigated through the reading and discussion of research papers. Students further develop the ability to pose questions and design experiments to answer them through writing a research proposal. Topics to be covered include: regulation of lineage specification/commitment and antigen receptor gene recombination; mechanisms of immunological tolerance and lymphocyte activation, cellular transactions and their consequences (e.g., APC:T cell); and immune responses in infectious diseases.

Associated Programs/Pathways: Immunology & Microbiology

Prerequisites: BBS 614 or BBS 748 (non-degree students) or course equivalent and BBS755, Infection and Immune Response (or their equivalent)

Fulfills an elective requirement: Yes

Credits: 3

BBS 822 - Advanced Animal Virology | Class #: 2664

This is a paper reading-based course discussing in depth new findings in animal virology, including viral biochemistry and molecular biology, genetics, oncogenesis, and pathogenesis. The course will be team-taught by UMMS faculty. The course will begin with introductory lectures to provide background for more advanced readings. Students will then cover different specific areas chosen by the professors in detail with paper readings. At the end of the course the students will write a research proposal and present it to the class and faculty.

Associated Programs/Pathways: Immunology & Microbiology

Prerequisites: BBS755, Infection and Immune Response, or their equivalent

Fulfills an elective requirement: Yes

Credits: 3

BBS 823 - Advanced Bacterial Pathogenesis | Class #: 2665

This course introduces students to cutting-edge topics in bacterial pathogenesis in a class format designed to encourage both critical analysis and concentration on experimental design, which will aid students in preparation for qualifying exams. The course meets once per week for 2.5-3 hours. Depending on class size and on a rotating basis, individual students, or groups of two or three students lead discussions of selected topics. Presenting students are required to prepare PowerPoint presentations to focus the discussion, and the following week to produce a Specific Aims page modeled after NIH R01 applications. The bulk of class time is devoted to open discussion, critical analysis of the literature, and constructive feedback of student reviews. In the end, each student develops and presents a research proposal on one of the topics discussed. Students taking the course for 2 credits will not be required to prepare the research proposal. Grading is based on quality of presentations, Specific Aims pages, and class participation (all students) and on the quality of the research outline (students taking the class for 3 credits).

Associated Programs/Pathways: Immunology & Microbiology

BBS 850 - Research Rotation (Exploratory Research Experience) | Class #: See class number list

1. Gain introductory exposure to research methodologies and practices
 - Students will observe, practice, or assist with research methods, techniques, or analytical approaches used in the group in order to develop familiarity with the methodological frameworks that define the research group's work.
2. Demonstrate professional engagement and readiness for doctoral research
 - Students will demonstrate responsible participation, intellectual curiosity, and scientific integrity through preparation, follow-through, and reflective communication, providing evidence of readiness for sustained dissertation research.
3. Build introductory familiarity with the scholarly literature relevant to the research group
 - Students will identify, read, and discuss selected primary literature to develop a basic understanding of the questions, approaches, and scholarly context of the research group.
4. Explore the research environment and scholarly culture of a research group
 - Students will engage in the intellectual life of the research group by participating in group meetings, seminars, and informal scientific discussions to understand how research questions are generated, refined, and pursued within that environment.
5. Reflect on alignment between the research group and the student's interests and working style
 - Students will assess how the research focus, mentoring style, expectations, and collaborative norms of the group align with their own goals, strengths, and learning needs.

Associated Programs/Pathways: Basic & Biomedical Sciences; Biophysical, Chemical, and Computational Biology

Prerequisites: None

Fulfills an elective requirement: No

Credits: Variable

Grading Type: Satisfactory/Unsatisfactory

BBS 860 - BBS Qualifying Exam | Class #: 1441

Students are required to register for this course in the fall semester of the academic year in which they are to pass their Qualifying Examination.

Associated Programs/Pathways: Basic & Biomedical Sciences; Biophysical, Chemical, and Computational Biology;

Prerequisites: None

Fulfills an elective requirement: No

Credits: 1

Grading Type: Pass/Marginal Pass/Fail

BBS 865 - BBS TRAC Meeting | Class #: 1345

All graduate students are required to have at least one Thesis Research Advisory Committee (TRAC) meeting each academic year. After passing their Qualifying Examination and selection of their TRAC, students are required to register for this course each fall semester until their Dissertation Advisory Committee is formed.

MD/PhD Goals:

- 1) To periodically review progress along thesis research project advised by content experts
- 2) To provide guidance for establishing a thesis research project consistent with the MD/PhD Program goals

MD/PhD Curricular Expectations: Two Thesis Research Advisory Committee (TRAC) meeting each academic year as define by the Professionalism Benchmark Checklist

Associated Programs/Pathways: Basic & Biomedical Sciences; Biophysical, Chemical, and Computational Biology

Prerequisites: None

Fulfills an elective requirement: No

Credits: 1

Grading Type: Satisfactory/Unsatisfactory

BBS 870 - Pre-Qualifying Research (Early Research & Candidacy Preparation) | Class #: See class number list

1. Develop foundational research competencies
 - Students will demonstrate the ability to formulate a research question, identify relevant literature, and articulate how their emerging project fits within the field.
2. Apply core research methodologies with and without supervision
 - Students will execute foundational experimental or analytical techniques and document their procedures and outcomes with increasing independence.
3. Critically evaluate research findings
 - Students will analyze preliminary data, identify limitations or alternative interpretations, and propose next steps grounded in scientific reasoning.
4. Develop a foundational knowledge base in the relevant scholarly literature
 - Students will critically engage with primary literature to support their developing research question and preparation for the qualifying examination.
5. Prepare a research proposal
 - Students will synthesize their knowledge base into a coherent proposal and engage in structured feedback with mentors to refine their rationale, aims, and research approach

Associated Programs/Pathways: Basic & Biomedical Sciences; Biophysical, Chemical, and Computational Biology

Prerequisites: None

Fulfills an elective requirement: No

Credits: 9

Grading Type: Satisfactory/Unsatisfactory

BBS 900 - Post-Candidacy Research (Deepening & Advancing the Dissertation) | Class #: See class number list

1. Advance an independent line of scientific inquiry
 - Students will design and implement research strategies that build directly toward dissertation aims, demonstrating increasing autonomy in decision-making.
2. Generate and interpret substantive research findings
 - Students will produce, analyze, and contextualize research results in relation to existing scholarship.
3. Maintain and apply current scholarly knowledge relevant to dissertation research
 - Students will evaluate and integrate current and foundational literature to guide research design, data interpretation, and refinement of dissertation aims.
4. Integrate feedback to refine the research trajectory
 - Students will incorporate mentor and committee guidance to adjust experimental plans, troubleshoot challenges, and prioritize high-impact next steps.
5. Communicate research effectively within the scientific community
 - Students will prepare and deliver clear written and oral presentations (e.g., manuscripts, TRAC updates, conference talks) that accurately convey the methods, results, conclusions, and significance of their dissertation research.

Associated Programs/Pathways: Basic & Biomedical Sciences; Biophysical, Chemical, and Computational Biology;

Prerequisites: None

Fulfills an elective requirement: No

Credits: 12

Grading Type: Satisfactory/Unsatisfactory

BBS 990 - Dissertation Completion Phase (Late-Stage Analysis, Integration, and Writing) |

Class #: See class number list

1. Synthesize and contextualize dissertation research
 - Students will integrate multiple results, data sets, and analyses into a coherent scholarly narrative that advances knowledge in their field.
2. Synthesize and situate dissertation research within the scholarly literature
 - Students will synthesize primary literature to contextualize their findings, articulate contributions to the field, and support dissertation writing and defense.
3. Prepare the dissertation and associated publications
 - Students will draft, revise, and finalize dissertation chapters and manuscripts that meet programmatic and disciplinary standards for scholarly communication.
4. Demonstrate readiness for the dissertation defense
 - Students will construct a clear and rigorous defense presentation, anticipate committee questions, and justify methodological and interpretive choices.
5. Articulate future research directions and professional goals
 - Students will identify and articulate logical extensions of their dissertation work and prepare materials (research statements, letters of intent, postdoctoral applications, job applications etc.) that reflect their emerging scholarly identity.
6. Demonstrate skills acquired in scientific communication through a professional oral presentation
 - Students will effectively communicate the importance of the problem that was studied, the central hypothesis of the work, the outcomes of the project, and how these outcomes test the central hypothesis for audience of peers, faculty, and community partners, in a manner that demonstrates clarity, engagement, and audience awareness

Population Health Sciences Courses

CTS 550 - Research Assistantship | Class #: See class number list

Research rotations are defined periods of research experience under the direction of a faculty member. They are intended to familiarize the student with concepts and techniques in several areas of research and to assist the student in evaluating research laboratories and projects that might be developed into a dissertation project. The student will participate in an on-going research project; gain familiarity with concepts underlying the research; acquire a working knowledge of techniques used in the research; and write a report and present an oral summary of the results of the research.

Associated Programs/Pathways: Postbaccalaureate Research Education Program

Grading Type: Pass/Marginal Pass/Fail

CTS 602A - Advanced Epidemiology & Research Methods | Class #: 2666

Building on graduate-level introductory epidemiology knowledge and scientific research methods, this course will cover research designs (clinical trial, cohort, case-control), explore the methodological strengths and weaknesses of various designs, and evaluate threats to the validity of major research designs. Students will have three examinations and weekly assignments that critique research approaches to specific scientific and clinical questions.

Associated Programs/Pathways: Population Health Sciences; MS Clinical Investigation;

Prerequisites: CTS605A or at least two graduate level courses in epidemiology and biostatistics.

Fulfills an elective requirement: No

CTS 605A - Introduction to Clinical and Translational Research | Class #: 2668

This course reviews basic principles of epidemiology and biostatistics. The course reviews the application of various observational and experimental research designs and strategies to clinical, epidemiological, and translational research. Didactic instruction, readings, and problem sets (including lab-based analyses) are used to more fully understand epidemics and their causes, as well as various study designs, including cross-sectional studies, case-control studies, cohort designs, and randomized clinical trials. Students also will learn basic principles of biostatistics and will be introduced to STATA for statistical computing. Students are graded on exams, problem sets, and lab assignments.

CTS 711 - Advanced Topics in Epidemiology – Fall 2026 Special Topic: Measurement and Latent Variable Modeling | Class #: 2669

This fall 2026 course focuses on measurement and latent variable modeling in epidemiology and population health research. It is structured as didactic instruction along with an applied studio where students learn to translate theoretical concepts into rigorous, real-world projects. Topics include psychometric validity and reliability, measurement variation across populations, and advanced mixture and trajectory modeling techniques. Throughout the semester, students will work continuously with either their own research data or a replication project, from the conceptualization of variables to building an operational latent variable model. Class sessions are highly interactive and include a hands-on simulation of the journal peer-review process and a collaborative review of common methodological and study design traps in published literature. By the conclusion of the course, students will have a completed analytic pipeline ready for use in manuscripts or dissertation chapters.

CTS 799 - Independent Study | Class #: See class number list

The purpose of an independent study elective is to gain in depth knowledge of a specific topic by working closely with a faculty member with expertise in that area. Typically independent studies cover areas not addressed in the core curriculum and advanced topics or other electives. However, the level of effort and objectives for an independent study must be equivalent to that of a regular three-credit course. The student and sponsoring faculty member must propose a framework and outcome for the independent study, in the semester prior to the semester in which the student will be enrolled, to the program director for prior approval.

MDP 740A - Becoming a Physician-Scientist A | Class #: 2550

Course Goal: This semester-long course is designed for first-year MD-PhD students to begin their exploration of medicine and science and the type of physician-scientist they would like to become. Students will explore potential thesis research groups and mentors. Additionally, students will be required to attend the Physician Scientist Forum (PSF), which explores themes including clinical problem solving, student research talks, science consults, and career development through didactic presentations and small group discussions. The course, taken both semesters of the first year, supports informed mentor selection and introduces students to diverse research opportunities across UMass Chan Medical School.

During their exploration of potential thesis research groups, students will engage with faculty and research teams through meetings and group activities, spending a minimum of 5 hours per semester in these exploratory experiences. Self-reported effort and active participation are required.

Attendance in a minimum of 6, 1-hour-long PSF classes is also required, per semester. Structured research activities may include the following:

- Meeting with prospective thesis advisors
- Attending lab meetings of prospective thesis advisors
- Attending a research seminar
- Attending a data club meeting

MDP 740B - Becoming a Physician-Scientist B | Class #: 1636

Course Goals: This semester-long course is designed for second-year MD-PhD students to continue their exploration of medicine and science and the type of physician-scientist they would like to become. Students will meet with their identified thesis advisor or continue to explore potential thesis research groups and mentors. Additionally, students will be required to attend the Physician Scientist Forum (PSF), which explores themes including clinical problem solving, student research talks, science consults, and career development through didactic presentations and small group discussions. The course, taken both semesters of the second year, supports informed mentor selection and deepens the student's exploration into diverse research opportunities across UMass Chan Medical School.

Learning Outcomes:

These course activities will be conducted in a manner that enables the student's intellectual contribution to the University's academic and research functions. Self-reported effort and active participation are required. Students will achieve course goals by attending and participating in a minimum of 8 sessions (per academic year) of the Physician Scientist Forum and a minimum of 5 hours (per semester) of structured research activities with their identified thesis advisor, which may include:

- Meeting with their identified thesis advisor at least once
- Attending their identified thesis advisor's lab meetings
- Going to a research seminar in their department
- Going to a data club meeting in their department

*If the student has not yet chosen a lab, they should use these hours to actively make an effort to identify a thesis lab.

MDP 741 - Clinical Experiences during PhD Thesis Research | Class #: 1637

Course Goals: The MD-PhD program stresses the importance of maintaining clinical involvement during students' dissertation research. The goal of this course is to allow students to maintain clinical skills in a variety of clinical settings. Sessions will reinforce clinical skills learned during the first two years of medical school, as well as during the first 16 weeks of Core Clinical Experiences (CCE).

Curricular Expectations: Students will work on an internal medicine inpatient service at UMass Memorial Medical Center on two separate days (~5 hours per day) during the academic year. They are also expected to attend 10 hours of clinical conferences (5 hours per semester).

Students must proactively record/track their time so that they can complete a form that will be sent at the end of each semester that shows their activities and how they have met these requirements.

Learning Outcomes:

- Students will maintain clinical skills through clinical exploration on an internal medicine inpatient unit
- Students will continue their clinical exploration by attending 10 hours of clinical conferences
- Students will reinforce clinical skills learned during the first two years of medical school, as well as during the first 16 weeks of Core Clinical Experiences (CCE).

Course Goals:

- To foster skills that MD/PhD students need to be maximally competitive for research intensive residency programs.
- To highlight connections between basic and clinical science through the presentation and discussion of patient cases.
- To expose postgraduate trainees to research conducted by MD/PhD students and promote opportunities for potential collaboration.
- To guide MD/PhD students regarding postgraduate training opportunities through interactions with residents, fellows, and faculty.

Curricular Expectations: This hour-long seminar is offered twice a month on Mondays at noon. Participation is required of all MD-PhD students in all years of the program who are not otherwise scheduled for clinical rotations
